BROADCASTBRAIN

AI BROADCAST PRODUCER

Broadcasters spend days preparing notes they'll never use. In the moment, the right stat is always one second too late.
We built the AI that has it ready — on screen, in your ear, or both — exactly when the play happens.

WHAT WE BUILD (22 hrs)

- Builds your spotting board automatically before first pitch
- Listens to the live game, understands the moment in <200ms
- Surfaces the right stat on a visual dashboard — you stay in control
- Opt-in voice: press a button, ask anything, get instant answer
- Triggers the graphics overlay simultaneously
- Complex queries route to Gemini via Cactus hybrid routing

THE VISION

Pre-game spotting board (auto-built) **BUILT**

Visual dashboard — live stat surface **BUILT**

Opt-in voice mode + graphics trigger **BUILT**

Social clip flagging + replay cuing **NEXT**

Full AI Broadcast Producer — one model, every role, simultaneously

THE STACK

Cactus (YC S25)
On-device inference + hybrid routing

Gemma 4
Voice understanding, <200ms on-device

Sportradar API
Real-time + historical stats

Gemini
Complex query routing via Cactus

75%	$150K	4 sec	ZERO	$67B	280+
Of prep notes never used during a game*	Cost per premium game broadcast	Window to say something brilliant after a play	Tools that surface stats without being asked	Sports media rights market	College programs with no research staff

* Trey Redfield, Syracuse / CBS Sports Radio broadcaster — direct interview

5-MIN DEMO

1 Show pre-built spotting board — generated overnight, zero manual work
2 Play a real game clip — big play happens → stat surfaces on dashboard instantly
3 Graphics overlay fires simultaneously (judges see it)
4 Press button → voice query: "Compare this to his playoff record" → answer in 2 sec
5 "4 broadcasters told us they use 25% of their prep. We built the AI that makes the other 75% useful."

TEAM

AI Core — Cactus + Gemma 4 pipeline — audio in, stat out

Data — Sportradar API integration + context detection logic

Voice — Audio pipeline + earpiece TTS + graphics trigger

Demo / Pitch — Live demo script + broadcaster outreach + UI

"The broadcaster stays in control. The AI makes sure the right stat is always there when they reach for it. Works for the on-air talent, the statistician at the table, and the one-person crew with no research staff. Validated with 4 working broadcasters — Brooklyn Nets, NY Mets, CBS Sports Radio, and local markets."

The broadcaster stays in control. The AI does the work.

Research validated with 4 working broadcasters. The insight: they don't want AI talking at them — they want it ready when they reach for it. We built that.

PHASE 1 — BUILT IN 22 HRS

The Spotter

Replaces: Research team + prep hours

- Auto-builds spotting board before first pitch
- Visual dashboard: right stat surfaces on screen
- Opt-in voice: button-triggered, never intrusive
- Works for on-air talent, statistician, or solo crew

PHASE 2 — NEXT — WEEKS

The Producer

Replaces: Director + graphics op

- Triggers lower-third graphics overlay
- Flags viral/social-worthy clips in real time
- Cues replay director on best angles
- Detects crowd reaction + emotional beats

PHASE 3 — THE VISION

The Network Brain

Replaces: Entire production crew

- Learns each broadcaster's voice + style
- Predictive: surfaces next storyline before play
- Multi-feed: runs multiple games simultaneously
- Replaces 15+ production roles with one model

280+ college programs, zero research staff → **Streaming** platforms (Amazon, Apple, Peacock) → **Major** networks (ESPN, Fox, CBS) → **$67B** sports media rights market

⚡ **WHY NOW** Gemma 4 is the first model fast enough on-device to fit inside a 4-second broadcast window

🔒 **THE MOAT** 4 broadcasters validated the gap. None of them found a tool that does this — broadcaster-controlled, not AI-driven

🎯 **THE WEDGE** Start with prep: zero live-game friction, immediate value, opens the door for real-time features
